

DUECK DEFENSE RTS W/TRITIUM

RAPID TRANSITION SIGHTS

DESCRIPTION

While optics are a great tool for engaging targets at distance, dealing with hold-overs or magnification adjustments for close-in targets can be cumbersome, slow, and inaccurate. Dueck Defense Rapid Transition Sights with tritium dots provide shooters with the quickest possible transition between longer- and closer-range target acquisition—even in low-light or nighttime conditions—greatly increasing their efficiency and effectiveness in competition. Designed by former Marine and national 3-gun champion Barry Dueck, Vice President of SureFire’s Suppressor Division, these innovative sights mount directly to a weapon’s MIL-STD-1913 (Picatinny) rail, offset from center by approximately 45°. They make transitioning from optic to iron sights a matter of simply canting your wrists and locking on to the target. There’s no removing a hand from the weapon or making a manual adjustment, no cluttered field of vision or iron sights blocking the optical sight—just smooth, quick transitions that could mean the difference between winning or losing a competition or, even more importantly, a gunfight.

FEATURES

- Still works when primary optic is fogged or obstructed
- Features larger tritium dot on front sight and two smaller tritium dots on rear sight for easy alignment in low-light conditions
- Lightweight and durable: machined from 7075 aluminum stock with twice the strength of 6061-T6 aluminum; Mil-Spec hard anodized
- Same height above bore as standard-issue M4 / M16A4 sights
- ½ MOA elevation and windage adjustments
- Ambidextrous sights easily and securely mount to MIL-STD-1913 (Picatinny) rails using a flathead screwdriver
- Low-profile sights extend only .2" (.5 mm) above top rail, won't interfere with primary optics
- Clears common military IR illuminator / lasers
- Made in the USA
