PRECISION MACHINED

FAST-ATTACH®

HEAT TREATED
STAINLESS STEEL

STAY ON
TARGET

DESCRIPTION

The advanced SureFire SFMB muzzle brake is designed to greatly reduce both recoil impulse and muzzle rise so that the weapon tracks straight back to keep you on target for faster shot-to-shot recovery. Its Impulse Diffusion design minimizes side blast and rear-directed concussion effects. The SFMB muzzle brake also serves as a rock-solid mounting adapter for SureFire SOCOM Series Fast-Attach® suppressors. Precision machined from US mill-certified heat-treated stainless steel bar stock—including high-precision single-point cut threads for optimum thread interface—the SFMB muzzle brake is given a black DLC coating to provide maximum protection under harsh environmental conditions and to facilitate cleaning even after extreme use. When used in conjunction with a SOCOM Series suppressor, the patent-pending design of the SFMB muzzle brake provides multiple bearing surfaces to ensure superior suppressor alignment. A rear labyrinth seal minimizes potential carbon buildup in the indexing system and facilitates suppressor removal after extended firing. All SureFire SOCOM Series muzzle brakes have pilot holes at the 3 and 9 o'clock position to enable fine-tuning of recoil characteristics for individual shooting styles or ammunition characteristics. They also have pilot holes at the 6 o'clock position to allow for pin-and-weld processing on short-barreled rifles. SureFire muzzle brakes are individually inspected for concentricity and alignment, and each is covered by SureFire's No-Hassle Guarantee.

FEATURES

- Models with 7.62 and larger bore diameter feature neutral porting so brake loads bipod legs evenly
- Models with bore diameter less than 7.62 (e.g. 5.56) feature offset porting so rifle tracks straight back
- Multiple bearing surfaces allow for superior suppressor alignment
- Serves as a mounting adapter for SureFire SOCOM and SOCOM2 Series Fast-Attach suppressors
